

# Award Winning Managed SOC Services for one of Europe's Largest Investment Companies

## Client Background

One of Europe's largest public pure-play Asset Management Groups..

## Challenge

With a growing global presence and over £300bn of funds under management, and an ever increasingly dynamic threat environment, this organisation wanted to be confident that their specific security concerns were being addressed.

They had previously been using a Gartner-recognised leading managed security service provider (MSSP) for X years, but their Chief Information Security Officer (CISO) recognised that this could not deliver the context aware security service they required, particularly around their critical trading platform.

Adarma was engaged to move this organisation to a specialist security platform. We lead them on a journey to create their own bespoke Security Operations Centre (SOC), maturing their technology and processes, and providing expert resources along the way.

## The Adarma Solution

Adarma planned, designed and deployed a dedicated on-site SOC for this financial organisation, and we are now responsible for running it.

Using the Splunk cyber analytics platform, we provide capability around cyber risk detection and response, operational security fulfilment, and Splunk engineering services, including use case creation, data onboarding and system health and wellbeing.

All these services involve working collaboratively as an extended part of the customer's team,

understanding their key security threats, and then designing, implementing and monitoring use cases, including data onboarding where required.

Adarma is proud to have been commissioned to build and manage this service, and the CISO considers it a major asset to the organisation.

## Benefits

Some of the key benefits include:

- ▼ Dedicated, bespoke SOC model built to deliver maximum client value.
- ▼ Improved contextual awareness of security risks.
- ▼ Management, training and staff retention are no longer a business issue.
- ▼ Increasing SOC's capacity to monitor a broader set of use cases
