

Cyber Security Assessment

The Adarma Way

The **dynamic threat** landscape makes effectively assessing, evaluating and forecasting your cyber security posture difficult. What works today may be inadequate tomorrow. It's not always clear where cyber security efforts should be focussed – best-fit for one organisation is not a guarantor of success in yours.

The Adarma Cyber Security Assessment can help. It gives you a concise understanding of your current cyber security posture, building a strong foundation for identifying and prioritising security improvements.

It begins with an interactive physical or virtual workshop to understand your business, and threat landscape. Over a typical 4 week period, we'll use discovery interviews, on-site workshops, and remote analysis to produce a profile carefully aligned to your organisation's business objectives and risk tolerance.

It's clear. It's concise. It's useful *immediately*.

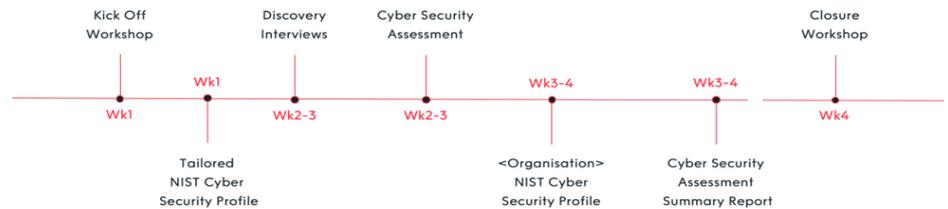

And because it's aligned to the globally recognised NIST Cyber Security Framework, the assessment uses clear and common language to maximise clarity and effectively communicate the outcomes to senior stakeholders.

We'll report your current cyber security posture, highlighting top priorities and recommending methods to remediate them. The closure workshop communicates the impact of the findings, generating deep-delving discussions.

The Adarma Cyber Security Assessment is an efficient means of determining where to focus future cyber risk management activities within your organisation in a clearly articulated way.

What challenges are addressed?

- **An incomplete view** of cyber security maturity across your organisation.
- **A lack of clarity** regarding priorities and focus that make it difficult to realise your target state.
- **Inadequate buy-in** from senior stakeholders when articulating key cyber security priorities and their significance.

What are the benefits?

- **Immediately actionable output.** No waffle, no waste: just concise reporting you can act on right away.
- **A prioritised snapshot** of your cyber security posture – where it's mature, where it falls short.
- **Aligned to NIST Cyber Security Framework** – an internationally recognised framework that we'll customise to your unique needs.
- **An effective roadmap** for scoping and managing your future cyber security risk management.
- **Directed and tailored** to the needs of your organisation.
- **Discussion-based, not evidence-based.** This isn't an audit: our discovery process uses what your stakeholders tell us so we can start faster – and deliver faster.
- **Skilled, experienced delivery team** of consultants - we've been where you are. We know how to get you where you want to be.

Cyber Security Assessment

About Adarma

We're one of the largest independent security services companies in the UK. Founded and run by experienced senior security leaders, we know security and how to deliver real value in the real world. That's why our clients are successful FTSE 350 organisations from all industry sectors.

Our teams are a diverse group of customer-facing technical experts and business-facing consultants, all with the same objective and united by the same goal: to help our clients prepare for attack and stand side-by-side with them when it happens.

We have the experience, proven track record, and recognition as industry specialists to ensure our cyber security solutions are tailored to your needs.
