

Tenable.io VM Engineering

The Adarma Way

Vulnerabilities classified as Critical by CVSS are rapidly increasing year-on-year – and at the same time, increasing use of elastic assets like virtual machines and cloud assets mean organisational attack surfaces are expanding.

Deciding where to put your focus in prioritising risk is almost overwhelmingly complex. Spoiler: it's not going to get any easier.

Tenable.io's cloud-based Vulnerability Management can help. It's flexible, scalable, and accurate – and because it's SaaS, you'll get an initial assessment within minutes. It rapidly prioritises vulnerabilities to let you begin risk reduction right away without imposing hardware or maintenance burdens on your IT team.

Adarma's Tenable.io engineers are skilled cyber security professionals, combining wide-ranging industry knowledge in vulnerability management with proven expertise in Tenable.io.

Backed by a wider practice with years of expertise in designing, implementing, and maintaining Security Operations for a range of FTSE 350 clients, our engineers will ensure your needs are met smoothly, efficiently, and reliably.

Beginning with a virtual or in-person workshop, we'll develop our understanding of your business and your needs, ensuring we translate them effectively into outcomes.

And when you're ready to delve into Tenable.io's more powerful capabilities – whether that's using the API to integrate with third party tools or share data with existing systems, developing Tenable.io's Predictive Prioritisation features, or even discussing how Adarma might assist in operating a vulnerability management service on your behalf - our team is ready to help.

Adarma's Delivery Team

- **Qualified, experienced engineers** with a background in cyber security, specialised in Tenable.io. We'll always ensure that the ask meets the need – security is who we are.
- **Experienced in all aspects of installation, on-boarding, and configuration.** We make the most of Tenable.io's capabilities as a tool in your security arsenal. Everything we do is aligned to Tenable.io standards and best practice.
- **Immersed in the wider threat landscape** - we know threats proliferate rapidly and unpredictably. Staying aware of the big picture helps us help you target and prioritise the most critical vulnerabilities.

Why Adarma?

- **We've got the expertise you need** to successfully build and integrate end-to-end solutions and deliver value to your organisation.
- **We understand the devices** and the platforms Tenable.io monitors. We speak your SME's language because we're natives.
- **We deliver value** through the service we implement and deliver – not upselling or vending licences.

"Vulnerabilities, and the exploitation of them, are still the root cause of most information security breaches today. Although not all breaches result from a vulnerability being exploited, most do. ... they also come from known vulnerabilities..."

- Gartner

Tenable.io VM Engineering

About Adarma

We're one of the largest independent security services companies in the UK. Founded and run by experienced senior security leaders, we know security and how to deliver real value in the real world. That's why our clients are successful FTSE 350 organisations from all industry sectors.

Our teams are a diverse group of customer-facing technical experts and business-facing consultants, all with the same objective and united by the same goal: to help our clients prepare for attack and stand side-by-side with them when it happens.

We have the experience, proven track record, and recognition as industry specialists to ensure our cyber security solutions are tailored to your needs.
