

Managed Services Component: Vulnerability Management – Tenable.io

Critical software vulnerabilities are increasing year-on-year at an alarming pace.

Adversaries are becoming smarter about their timing, more sophisticated in their deployment, causing maximum damage.

More use of elastic assets like virtual machines and cloud-based systems (and the technologies behind them) means attack surfaces are experiencing a similar boom: more targets. More vulnerabilities.

More risk.

Risk that you need to control in a way that's reliable and effective, driven by intelligence and expertise – and without the burden of managing the complex systems needed to deliver that control.

Adarma can help.

Adarma's Vulnerability Management Service

Adarma's Vulnerability Management Service
Adarma was founded to make the world a safer place to do business, and our managed service products are designed to assure our customers of the best possible cyber defence.

We offer an unprecedented level of partnership and transparency.

Our analysts are cyber security professionals with combined decades of experience in SOC management and operations. Our SOAR capabilities make us fast and efficient in incident correlation and triage, IOC enrichment, and reporting.

Our threat intelligence platform keeps customers informed of threats to their security landscape as they emerge and trend - and our analysts alert to detect them.

Adarma and Tenable.io

Our Vulnerability Management (VM) service is supported by these capabilities.

Adarma uses Tenable.io, a cloud-based, flexible, modular VM platform to assist in accurately and efficiently identifying the vulnerabilities in your infrastructure.

We chose it because of its lightweight client, speed of operation, and powerful integrated intelligence and threat/risk assessment capabilities. Each of your assets is tracked by attribute, so when a change to any of them occurs it's identified, prioritised, and monitored – as it happens.

Combining our analysts' expertise with Tenable.io's best features, we provide you with clear, concise recommendations on prioritising remediation tasks based on a range of global intelligence sources.

Our service identifies, contextualises, tracks and prioritises vulnerabilities in your IT estate to give you the confidence to make the decisions that keep your risks under control.

Tenable.io Key Features

Intelligence: Tenable.io has 32% greater vulnerability coverage than competitors.

Vulnerability Prioritisation: ML predictive prioritisation reduces vulnerabilities requiring immediate attention by up to 97% - keeping analyst expertise focussed where it matters.

Speed/Footprint: Once deployed, Tenable.io's SaaS cloud-based solution performs initial assessments in less than five minutes with minimal burden on hardware.

Managed Services Component: Vulnerability Management – Tenable.io

Informed by best practice frameworks (such as DISA Security Technical Implementation Guides and CIS benchmarks), over 150 data sources are used with a unique Machine Learning (ML) algorithm to prioritise vulnerabilities based on the probability they'll be used to attack your organisation.

With multiple approach scanning via Nessus Scanners and Nessus Agents, each asset in your infrastructure is tracked, however they're deployed. When changes to their attributes occur they're immediately noted and tracked.

About Adarma

We're one of the largest independent security services companies in the UK. As a business formed and run by experienced senior security leaders, we know security and how to deliver real value in the real world. This is why our clients are successful FTSE 350 organisations from all industry sectors.

Adarma delivers innovative tailored solutions for some of the world's biggest companies. Our teams are a diverse group of technical experts and consultants, all with the same objective and united by the same goal: to help our clients prepare for attack and stand side-by-side with them when it happens.

Helping make the world a safer place.
